

Day 105 — TNPSC Group 2A Study Material

Part A – General Studies: Current Affairs in Indian Polity (9): The Corporate Laws (Amendment) Bill, 2026

READING MATERIAL

Covers the Corporate Laws (Amendment) Bill, 2026 — amending the Companies Act, 2013 and the LLP Act, 2008.

Q: When was the Corporate Laws (Amendment) Bill, 2026 introduced, and what is its current status?

A: Introduced in the Lok Sabha on 23 March 2026; referred to a Joint Parliamentary Committee (JPC) for comprehensive clause-by-clause scrutiny and stakeholder consultation.

Q: Which 2 Acts does this Bill amend?

A: The Companies Act, 2013 and the Limited Liability Partnership (LLP) Act, 2008.

Q: What is the Bill's core decriminalisation approach?

A: It replaces imprisonment/fine for several offences (e.g., failure to furnish information to the Registrar, violations of book-of-accounts requirements) with CIVIL PENALTIES instead.

Q: What change does the Bill make to Corporate Social Responsibility (CSR) compliance?

A: It raises/adjusts the net profit threshold for CSR applicability to ₹10 crore (or another prescribed sum) — companies meeting prescribed conditions below this threshold won't need to comply with CSR provisions.

Q: What new flexibility does the Bill provide for Annual General Meetings (AGMs)?

A: Companies may hold AGMs physically, via video conferencing, or other audio-visual means — but must still hold a PHYSICAL meeting at least once every 3 years.

Q: Which regulatory body does the Bill designate as the new 'Valuation Authority'?

A: The Insolvency and Bankruptcy Board of India (IBBI) — responsible for registering/recognising valuers and recommending valuation standards to the government.

MOCK TEST (WITH ANSWERS)

1. The Corporate Laws (Amendment) Bill, 2026 was introduced in the Lok Sabha on:

- A. 23 January 2026
- B. 23 February 2026
- C. 23 March 2026 ✓**
- D. 23 April 2026

Explanation: 23 March 2026. [hard, web-research]

2. The Corporate Laws (Amendment) Bill, 2026 amends the Companies Act, 2013 and which other Act?

- A. The SEBI Act, 1992
- B. The LLP Act, 2008 ✓**
- C. The Competition Act, 2002
- D. The Insolvency and Bankruptcy Code, 2016

Explanation: The LLP Act, 2008. [medium, web-research]

3. The Bill's decriminalisation approach replaces imprisonment/fine for several offences with:

- A. Civil penalties ✓**
- B. Community service
- C. Automatic company dissolution
- D. No penalty at all

Explanation: Civil penalties. [medium, web-research]

4. Under the Bill, companies must hold a physical AGM at least once every:

- A. 1 year
- B. 2 years**

C. 3 years ✓

D. 5 years

Explanation: 3 years. [medium, web-research]

5. The Bill designates which body as the new 'Valuation Authority'?

A. SEBI

B. RBI

C. IBBI ✓

D. NCLT

Explanation: IBBI (Insolvency and Bankruptcy Board of India). [hard, web-research]

Part B – Aptitude & Mental Ability: Volume

READING MATERIAL

Volume is the last of 10 named Aptitude sub-skills. Real exam evidence shows two dominant shapes: 'ratio of dimensions $\rightarrow$ ratio of volumes' (scaling), and 'melt/recast one solid into another shape' (volume is conserved, surface area is not) — both are core techniques worth knowing cold.

Q: Method — ratio of volumes from a ratio of radii (same shape): If the radius of one sphere is half that of another, what is the ratio of their volumes?

A: Volume scales with the CUBE of linear dimensions ($V = \frac{4}{3}\pi r^3$), not directly with the radius. So if $r_1:r_2 = 1:2$, then $V_1:V_2 = 1^3:2^3 = 1:8$.

Q: Method — melting and recasting (volume is conserved, NOT surface area): A sphere of radius 9cm is melted and recast into a cone of the same radius (9cm). Find the cone's height.

A: Set sphere volume = cone volume: $(\frac{4}{3})\pi(9)^3 = (\frac{1}{3})\pi(9)^2h \rightarrow (\frac{4}{3})(729) = (\frac{1}{3})(81)h \rightarrow 972 = 27h \rightarrow h = 36$ cm. The general shortcut: for melting sphere $\rightarrow$ cone of the SAME radius, height = $4 \times$ radius always (since the $(\frac{4}{3})r^3$ vs $(\frac{1}{3})r^2h$ relationship reduces to $h=4r$ when radii match).

Q: Real exam (already seen in an earlier topic, re-noted here): A sphere of diameter 8cm is melted and drawn into a wire of diameter 3mm. Find the wire's length.

A: Volume conserved: $(\frac{4}{3})\pi(4)^3 = \pi(0.15)^2 \times h \rightarrow h \approx 3792.6$ cm ≈ 37.9 m. (Same melt/recast principle as $rO2$, just sphere $\rightarrow$ cylinder/wire instead of sphere $\rightarrow$ cone.)

Q: Method — volume of a cylindrical tank from its capacity: A cylindrical tank has capacity 1,848 m³ and base diameter 14m. Find its depth.

A: $V = \pi r^2 h \rightarrow 1848 = (\frac{22}{7}) \times 7^2 \times h = 154h \rightarrow h = 12$ m.

Q: Method — dug-out soil redistributed into a different shape (volume conserved): A cylindrical well of depth 20m, diameter 14m is dug; the soil is spread evenly to form a cuboid platform of base 20m $\times$ 14m. Find the platform's height.

A: Well volume = $(\frac{22}{7}) \times 7^2 \times 20 = 3,080$ m³. Platform volume = $20 \times 14 \times h = 280h$. Set equal: $280h = 3080 \rightarrow h = 11$ m.

Q: Formula check: volume of a cube with side 5cm, and the relationship between a cube's volume and surface area.

A: Volume = side³ = $5^3 = 125$ cm³. If a cube's volume is 1000 cm³, its side = $\sqrt[3]{1000} = 10$ cm, so its surface area = $6 \times \text{side}^2 = 6 \times 100 = 600$ cm² (cube surface area = $6 \times \text{side}^2$, from its 6 square faces).

Q: Method — ratio of volumes for cone, sphere, cylinder of equal radius AND equal height: What is that ratio?

A: Cone : Sphere : Cylinder = 1 : 4 : 3, when all three share the same radius r and the same height h (for the sphere, 'height' = its diameter = $2r$ in this comparison). This is a frequently tested ratio worth memorizing directly.

MOCK TEST (WITH ANSWERS)

1. If the radius of sphere A is 3 times the radius of sphere B, what is the ratio of their volumes (A:B)?

- A. 3:1
- B. 9:1
- C. 27:1 ✓
- D. 6:1

Explanation: Volume ratio = (radius ratio)³ = $3^3:1^3 = 27:1$. [easy, authored]

2. A solid sphere of radius 6cm is melted and recast into a cone of the same radius. Find the cone's height.

- A. 18 cm
- B. 24 cm ✓
- C. 12 cm
- D. 6 cm

Explanation: Using the shortcut $h = 4 \times$ radius for sphere $\rightarrow$ same-radius-cone: $h = 4 \times 6 = 24$ cm. [medium, authored]

3. A cylindrical tank has capacity 4,620 m³ and base diameter 14m. Find its depth.

- A. 20 m
- B. 25 m
- C. 30 m ✓

D. 15 m

Explanation: $V = \pi r^2 h \rightarrow 4620 = (22/7) \times 49 \times h = 154h \rightarrow h = 30\text{m}$. [medium, authored]

4. Find the volume of a cube with side 8cm.

A. 512 cm³ ✓

B. 256 cm³

C. 64 cm³

D. 640 cm³

Explanation: $8^3 = 512\text{ cm}^3$. [easy, authored]

5. If a cube's volume is 2,197 cm³, find its surface area.

A. 507 cm²

B. 169 cm²

C. 1014 cm² ✓

D. 338 cm²

Explanation: Side = $\sqrt[3]{2197} = 13\text{cm}$. Surface area = $6 \times 13^2 = 6 \times 169 = 1,014\text{ cm}^2$. [medium, authored]

6. A cone, a sphere, and a cylinder share the same radius and same height. What is the ratio of their volumes (cone:sphere:cylinder)?

A. 1:3:4

B. 1:4:3 ✓

C. 3:4:1

D. 4:3:1

Explanation: Cone:Sphere:Cylinder = 1:4:3 for equal radius and height. [medium, web-research]

Part C – General English: Poem: "The Star" — Jane Taylor

READING MATERIAL

The classic nursery rhyme "Twinkle, Twinkle, Little Star", attributed in this syllabus to its original author, Jane Taylor. Real coaching-site evidence tests the well-known simile and structural facts.

Q: Who wrote "The Star" (better known as "Twinkle, Twinkle, Little Star")?

A: Jane Taylor.

Q: What is the poem's rhyme scheme?

A: AABB.

Q: Identify the figure of speech: "Like a diamond in the sky."

A: Simile — directly compares the star's twinkle to a diamond using 'like'.

Q: What does "twinkle" mean?

A: To shine with a flickering light.

Q: Identify the figure of speech: "You never shut your eye."

A: Personification — the star is given the human attribute of having an 'eye' that it keeps open (i.e., it doesn't 'sleep', continuing to shine).

Q: What happens, per the poem, when "the blazing sun is gone"?

A: The star begins to shine (i.e., the star becomes visible once daylight fades).

MOCK TEST (WITH ANSWERS)

1. "The Star" was written by:

- A. Emily Dickinson
- B. Robert Louis Stevenson
- C. Jane Taylor ✓**
- D. William Wordsworth

Explanation: Jane Taylor. [easy, web-research]

2. What is the rhyme scheme of "The Star"?

- A. ABAB
- B. AABB ✓**
- C. ABCD
- D. ABCA

Explanation: AABB. [medium, web-research]

3. "Like a diamond in the sky" is an example of:

- A. Metaphor
- B. Hyperbole
- C. Simile ✓**
- D. Irony

Explanation: Simile — uses 'like'. [easy, web-research]

4. In the poem, "twinkle" means:

- A. Float slowly
- B. Shine with a flickering light ✓**
- C. Jump or fly
- D. Melt and disappear

Explanation: Shine with a flickering light. [easy, web-research]

5. "You never shut your eye" uses which figure of speech?

- A. Hyperbole
- B. Simile

C. Personification ✓

D. Metaphor

Explanation: Personification — the star given a human 'eye'. [medium, web-research]

6. What happens when "the blazing sun is gone", per the poem?

A. The star stops twinkling

B. The sky becomes red

C. The star begins to shine ✓

D. The moon rises

Explanation: The star begins to shine. [medium, web-research]
